N9A 5S6, hereby applies for amendments, as described below, to Pollution Control Permit PE-1133, granted on February 14, 1972, which authorized the discharge of process effluent from an alum manufacturing plant located at Burnaby, B.C., to the ground.

Amendments Requested:

From: The present permit allows for a daily quantity of process effluent to be discharged of 4,130 imperial gallons a

day.

To: Due to production increases over the past several years, particularly in the dry alum section of the plant, the daily effluent discharge is 8,600 imperial gallons maximum, if there is no rainfall, or up to 13.600 imperial gallons during a month of heavy rainfall. The production increase from 1972 to 1979 was 15% over all, but dry alum production was up 50%.
